ELITE LAMB CREEP PELLET

Elite Lamb Creep pellet encourages the early intake of concentrate feed, which has a positive effect on young lambs. Consuming concentrates young initiates early rumen development and supports improved growth rates. This contributes to earlier weaning and finishing.

Elite Lamb Creep is a pelleted supplement, specifically designed to promote early rumen development, and optimise growth rates in young lambs by supplying quality proteins, vitamins, and minerals. Elite Lamb Creep pellet also contains ingredients selected to promote animal and gut health.

Creep feeding is highly beneficial when

- Feed on offer in the paddock is limiting or of low quality, limiting the ewe's milk production, therefore having a negative effect on lamb performance.
- The ewe's body condition at the time of lambing isn't ideal, contributing to a compromised milking ability.
- Ewes are already receiving some form of supplement feed, however, lamb performance is still lower than ideal.
- The specific market for the lambs requires them to meet certain target weights.
- Supplied to twin-bearing mobs, in which most lambs are being raised as twins.

Elite Lamb Creep pellet contains quality proteins derived from sources such as lupins and peas, canola and soybean meal. The combination of the protein meals and legumes deliver balanced quantities of essential amino acids, such as lysine and methionine.

With high levels of vitamins and minerals, Elite Lamb Creep supplies the lambs with the desired quantities of vitamins and minerals at a low daily intake. High levels of molasses and flavouring have been added to the formula to encourage intake. If daily intake exceeds 500g/hd/day contact a NFS nutritionist.

Elite Lamb Creep should be offered on an ad-lib basis in conjunction with a suitable forage and effective fibre source, as well as clean, fresh water. Elite Lamb Creep should be offered in an area that older animals cannot access. To initially encourage intake, Trial feeding the ewes and lambs together on the ewes' current ration. Ensure the feeders are the appropriate size to reduce competition, allowing lambs better access to the feed.

Typical Analysis (per Kg, As-Fed Basis)

Protein	%	18.66
Salt	%	0.50
Starch	%	42.44
Sugar	%	4.78
Fat	%	3.33
ADF	%	8.98
NDF	%	19.25
Ash	%	6.79
